HW 2 - U2 - Selective and Iterative Control Structures

Problem 2 — BMI Calculator

```
while True:
    # INPUT
    win = input("weight = ").strip().lower()
    if win == 'exit':
        break
    hin = input("height = ")
    # PROCESS
    w = float(win)
    h = float(hin)
    bmi = w / (h ** 2)
    if bmi < 18.5:
        tb = "Underweight"
    elif bmi <= 24.9:
        tb = "Normal"
    elif bmi <= 29.9:
        tb = "Overweight"
    else:
        tb = "Obese"
    # OUTPUT
    print(f"BMI: {bmi:.2f} - {tb}")
```
